Health Requirements for Day School

Puppies Under 12 Weeks Old

- Your puppy has lived in your home for at least one week.
- 1 or more vaccination against distemper & parvo
This is often listed on your receipt as a combo shot, “DA2P” or similar.
- Vaccination against bordetella (canine cough/kennel cough)
- Negative fecal test performed by your vet, not the breeder/rescue’s vet.
We require a copy of the test result from the lab (such as IDEXX), not just a receipt confirming a test was performed. The test must screen for giardia in addition to other parasites.

Puppies 12 Weeks+ and Adult Dogs

- Your puppy has lived in your home for at least one week.
- 2 or more vaccinations against distemper & parvo
This is often listed on your receipt as a combo shot, “DA2P” or similar.
- Vaccination against bordetella (canine cough/kennel cough)
- Negative fecal test performed by your vet, not the breeder/rescue’s vet.
We require a copy of the test result from the lab (such as IDEXX), not just a receipt confirming a test was performed. The test must screen for giardia in addition to other parasites.
- Vaccination against rabies

Your dog or puppy should also be on monthly flea/tick/heartworm preventative.
We also recommend discussing the canine influenza vaccination with your veterinarian.
